THE BEST OF BOTH WORLDS

TIRES + TRACKS

Crawler Tracks and Transport Dolly

Crawler tracks minimize downtime by navigating rough terrain and cramped spaces, which eliminating the need to reposition trailers and forward raw material to your grinder. We've maximized these time-saving benefits by adding a removable transport dolly that eliminates the need for a separate trailer. If you have frequent moves between work sites that require the enhanced maneuverability of tracks, the transport dolly lets you spend less time getting ready to grind and more time producing engineered fiber commodities.

- **Go from tires to tracks in minutes**
- **Same ground clearance as a lowbed trailer**
- **Powered entirely by the main hydraulic system**
- **No special tools required—just drive on and off the dolly with the crawler tracks**

Contact us today to learn how a high-volume grinder with tracks and transport dolly can simplify your grinding operation.

Arrive at your job site on tires

Park your truck

Track away from the dolly
